

Radiat MN performing the noise of mind

Werktitel: Radiat MN performing the noise of mind

Untertitel:

Installation and performance instructions for a solo performance with a contrabass recorder (or any other instrument), voice and 4 microphones, 4 installed speakers

KomponistIn: [Palme Pia](#)

Entstehungsjahr: 2013

Dauer: 4h 30m

Genre(s): Neue Musik

Gattung(en): Performance Klanginstallation Vokalmusik Improvisierte Musik

Besetzung: Duo

Besetzungsdetails:

[Kontrabassblockflöte](#) (1, auch Stimme), Klanginstallation, four microphones: are placed along a line in space, Live-Improvisation, 4 installed speakers

Art der Publikation: Manuskript

Beschreibung

"A collaborative project by Pia Palme & Ryoko Akama.

This juxtaposition of sonic installations by two composers draws on different perspectives of 'noise'. Akama explores social noise from her position as a sound artist, whereas Palme uses the noise/signal duality to define her performance of personal mind's activity. The pieces co-exist and interfere with each other in shared space. The resulting work discusses the cross-perspectives and methodologies of individual approaches, overlaid and influenced by parallel working processes.

RADIAT MN – Pia Palme: In this installation Palme performs the multi-layered structure of the 'noise of mind' as she observes it during live improvisation. Four speakers and a human performer – Palme performing a contrabass recorder and

four microphones – are placed along a line in space.

In musical practice, thought activity during a performance is largely considered as 'noise' – an unwanted by-product of the mind. Here, Palme redefines the relevancy of her inner states by reversing the noise/signal duality: the totality of the mind's activity is turned into performative material, re-composed and reproduced by vocal and instrumental production, captured and amplified with microphones and exploded into the environment.

The five-tiered score governing this performance requires precise awareness and monitoring of one's inner states. Palme defines the mind as inclusive and multi-layered, on a scale from the internal monologue, the longing to communicate, emotions and perceptions, to extrovert vocal production; the instrument, as an extension of her breath, marks the shifting border between inside and outside.

Actions to re-perform mental movements include extended techniques picked up by four separate microphones, such as a radio transmitted throat-microphone with PTT-button. The sonic layers are distributed to four separate speakers.

The sonic environment oscillates between noise and signal; which part of mental activity is relevant for a performance and which is not?

RADIAT GC – Ryoko Akama: Akama's installation draws on environmental and ecological concerns in which social noise and its capability of collaborative-ness are questioned. It uses a Geiger counter, a radiation detector in the air, and radio transmission system. Water in a pool is vibrated by four speakers which receive frequency compositions created by noise data through a Geiger counter. The cymatic patterns which occur on the water's surface result from the transformation of sonic energy. This physicality of information science sustains optic listening and a subtle encounter with low frequency soundscapes."

Pia Palme (2013)

Uraufführung

5. Oktober 2013 - [Huddersfield](#), University of Huddersfield

Veranstaltung: conference 'Noise as in music'

Mitwirkende: [Pia Palme](#) (Komposition, Kontrabassblockflöte u. Stimme), Ryoko Akama (Komposition, Klanginstallation)

Weitere Informationen: A collaborative project by Pia Palme & Ryoko Akama
